this book involves application of the calphad method for derivation of a self consistent thermodynamic database for the geologically important system $\text{MgO-FeO-Fe}_2\text{O}_3\text{-Al}_2\text{O}_3\text{-SiO}_2$ at pressures and temperatures of earth's upper mantle and the transition zone of that mantle for earth the created thermodynamic database reproduces phase relations at 1 bar and at pressures up to 30 gpa the minerals are modelled by compound energy formalism which gives realistic descriptions of their gibbs energy and takes into account crystal structure data it incorporates a detailed review of diverse types of experimental data which are used to derive the thermodynamic database phase equilibria calorimetric studies and thermoelastic property measurements the book also contains tables of thermodynamic properties at 1 bar enthalpy and gibbs energy of formation from the elements entropy and heat capacity and equation of state data at pressures from 1 bar to 30 gpa mixing parameters of solid solutions are also provided by the book table of contents introduction to the series v acknowledgments vii preface ix table of contents xi co authors xiii vitae of co authors xv codata task group on geothermodynamic data xxiii chapter 1 thermodynamics and modeling 1 1 1 introduction 1 1 2 thermodynamic modeling 1 1 3 experimental data 3 1 4 programs and assessment 4 system and phases 5 1 5 chapter 2 experimental phase equilibrium data 7 the SiO_2 system 7 2 1 2 2 the FeO system 8 2 3 the Fe-SiO system 10 2 4 the MgO-SiO system

this monograph acts as a benchmark to current achievements in the field of computer coupling of phase diagrams and thermochemistry often called calphad which is an acronym for computer calculation of phase diagrams it also acts as a guide to both the basic background of the subject area and the cutting edge of the topic combining comprehensive discussions of the underlying physical principles of the calphad method with detailed descriptions of their application to real complex multi component materials approaches which combine both thermodynamic and kinetic models to interpret non equilibrium phase transformations are also reviewed

the present theoretical and experimental knowledge of the time evolution of a system during solidification not only in equilibrium but also in nonequilibrium conditions is summarized in this book such knowledge is of fundamental importance for the determination of the constitution of materials or of the technological conditions necessary to prepare materials with a desired structure emphasizing the importance of kinetic phase diagrams the authors focus the attention of the reader on the problems connected with nonequilibrium conditions that are encountered during real phase transformations a critical review of phenomenological and statistical theories of phase transformations and of mass and heat transport enables the reader to determine the range of applicability of concrete models for

the description of the evolution of a given system the book is supplemented with several less known methods and results of phase characterization including a detailed account of the soviet school of t a cherepanova which is not well known in the west the text also covers the modern research area of glasses and their preparation

it has been recognized that productivity improvement is an important issue of the 80 s it is regarded as the most efficient way to improve national economy and to enrich the quality of life the key to productivity improvement is advanced automation especially computer integrated automation for engineering design and office operations as well as manufacturing processes this is the theme of 1983 international conference on advanced automation icaa 83 this book contains the articles which are the revised and updated version of the papers presented at the icaa 83 conference traditionally automation is synonymous with mechanization but this conference has treated automation from a different point of view we consider automation as a process to unify various automated information processing systems for performing business administration design engineering and manufacturing functions in addition to the traditional fixed automation in production in other words design automation and office automation form an integral part of factory automation to accomplish comprehensive computer integrated manufacturing and production in engineering and manufacturing today quality design and high productivity are synonymous with the use of computers robots expert systems and other computer based technologies the greater the degree of computer based automation exploited and implemented the greater a nation s ability to survive in tomorrow s extremely competitive world market
