an accessible and engaging account of the mind and its connection to the brain the mind encompasses everything we experience and these experiences are created by the brain often without our awareness experience is private we can t know the minds of others but we also don t know what is happening in our own minds in this book e bruce goldstein offers an accessible and engaging account of the mind and its connection to the brain he takes as his starting point two central questions what is the mind and what is consciousness and leads readers through topics that range from conceptions of the mind in popular culture to the wiring system of the brain throughout he draws on the latest research explaining its significance and relevance goldstein discusses how the mind has been described and studied since the nineteenth century and surveys modern approaches to studying mind brain connections considers consciousness and how the nervous system creates experience and explores the hidden mechanisms of the brain then in the heart of the book he focuses on one principle that holds across a wide range of the mind s functions prediction all the behaviors and physiological processes associated with prediction including eye movements tactile sensation language music memory and social processes involve communication between different places in the brain the mind emerges not from the firing of neurons in one specialized area but from communications that travel across what goldstein calls highways of the mind

excerpt everything that is in action must necessarily work through definite laws and as the mind is in constant action alternating its actions at almost every turn of thought or feeling it is evident that a vast number of laws are employed by the mental process to know how the mind works therefore we must know something about these laws in the following pages the most important of the mental and metaphysical laws known to date are considered from every possible viewpoint the principal object being to ascertain their real nature as well as their power and use in addition a number of psychological ideas are presented that will throw light both on the inner and the outer workings of the mind no effort however has been made to delve into the mysteries of

the mind this will be done in another work the object here being to present the practical side of mental action and present it in such a way that anyone may learn to use the powers of the mind properly and at the present stage of psychological study this is the most important we want to know how the mind does work so that we may in all mental work use the mind in the best the fullest and the most effective manner the fact that we have in the past known practically nothing about the real workings of the mind and also that there are only a few minds even in the present that have gained the power to direct and control mental action according to system design and law should make the study of this book both interesting and profitable in fact we are convinced that all who understand the purpose and the message of this book will become highly enthused over its practical value and will accordingly gain more from its perusal than tongue can ever tell that this number may be very large in the present and constantly become larger in the future is our dearest wish in this connection for when you know that a certain thing is so very true and so very important you want everybody else if possible to gain all that you have gained from the understanding and use of that particular thing and this is natural we all want to share the truth with others we all want everybody to gain that power through which the richest and the best that life has in store may be realized and this fact proves that there is far more of the noble in human nature than we have previously believed however it is only as we learn to use the mind in harmony with the natural and orderly workings of mental law that everything that is noble in human nature will find expression the greatest power in man it is now a demonstrated fact that the powers and the possibilities that are inherent in the mind of man are practically unbounded and this conclusion is based upon the discovery that no limit can be found to anything in human nature and that everything in human nature contains a latent capacity for perpetual development this discovery and no discovery of greater importance has appeared in any age gives man a new conception of himself a conception which when applied will necessarily revolutionize the entire sphere of human thought and action
