while german and japanese scientists also labored unsuccessfully to create an atomic bomb by the summer of 1945 the american led team was ready to test its first weapon as the clock ticked down to the detonation time of 05 30 hours on 16 july 1945 the nervous team of technicians and scientists waited ten miles away from ground zero deep in the new mexico desert no one knew how powerful the explosion would be or whether even at such a distance they would be safe from the blast even so some chose to observe the

detonation from a point four miles nearer at the control bunker but then no one was even sure that the bomb would work what if that is actually what happened under schedule pressure from the white house the scientists assembled the device in part with tape and tissue paper knowing some components were flawed these are verifiable facts it means that as many of those who gathered in the new mexico desert feared at the time the bomb might not have worked during that first test in the first atomic bomb jim mangi explores what might happened in the event that the world s first atomic bomb had not been ready for use when it was how would this have affected the end of the war in the pacific and indeed the second world war as a whole would emperor hirohito s armed forces have battled on when might colonel paul w tibbets at the controls of his boeing b 29 superfortress enola gay have then made his historic flight over hiroshima and would that city even have remained the target how would stalin and the soviets have reacted to such developments and how would this have played out in the post war world

2024 southwest book of the year on july 16 1945 just weeks before the atomic bombing of hiroshima and nagasaki that brought about the surrender of japan and the end of world war ii the united states unleashed the world s first atomic bomb at the trinity testing site located in the remote tularosa valley in south central new mexico immensely more powerful than any weapon the world had seen the bomb s effects on the surrounding and downwind communities of plants animals birds and humans have lasted decades in the first atomic bomb janet farrell brodie explores the history of the trinity test and those whose contributions have rarely if ever been discussed the men and women who constructed served and witnessed the first test as well as the downwinders who suffered the consequences of the radiation concentrating on these ordinary people laborers ranchers and indigenous peoples who lived in the region and participated in the testing brodie corrects the lack of coverage in existing scholarship on the essential details and everyday experiences of this globally significant event the first atomic bomb also covers the environmental preservation of the trinity test site and compares it with the wide range of atomic sites now preserved independently or as part of the new manhattan project national historical park although the trinity site became a significant node for testing the new weapons of the postwar united states it is known today as an officially designated national historic landmark brodie presents a timely important and innovative study of an explosion that carries special historical weight in american memory

describing the sequence of events that led up to the use of the world s first atom bomb this book uses contemporary photography diagrams and maps to illustrate the consequences of the bomb and the impact it has had in the nuclear age

now from time to time you might hear the term nuclear bomb used while other times you may hear the term atomic bomb what is the difference any bomb that uses tiny reactions inside the nucleus of a microscopic atom is by definition a nuclear bomb however the first nuclear bombs were much simpler than today s bombs which use multiple steps to produce their large explosions the first nuclear bombs that were produced relied only on this special microscopic reaction in the atom and so are called atomic bombs and it is this kind that we will be talking about find out about this exciting and complex period of time in this kid s book

in the summer of 1945 the world was introduced to the horrific consequences of nuclear warfare on the sixth day of august an american b 29 bomber dropped a revolutionary new weapon the atomic bomb over the japanese city of hiroshima the catastrophic detonation instantly killed over 100 000 residents of the city with thousands more dying from explosion related injuries in the months and years to follow three days later a second nuclear weapon was released over the skies of nagasaki killing over 40 000 japanese citizens most of whom were civilians six days after the second nuclear attack the empire of japan surrendered and world war ii was ended jubilation among the allied countries was tempered by a profound sense of relief nearly four years of bloody war had finally come to an end some 406 000 americans died during world war ii while another 671 000 were wounded by the end of the war an astonishing one out of every one hundred thirty

six americans had been killed or wounded in the fighting american military personnel along with their spouses children parents and friends were eager to see the bloody conflict come to and end by any means possible consequently president harry truman s decision to utilize the atomic bomb to bring japan to its knees was wildly popular in the weeks and months that followed the japanese surrender in the six plus decades since hiroshima and nagasaki however many have questioned both the necessity and morality of america s deployment of the bomb significantly influenced by revisionist history passionate debate has focused on the justification for nuclear warfare to subdue an enemy already nearing defeat like so many other momentous events the reader must balance the reality of the world in 1945 against the seemingly clearer prism of revisionist history fire in the sky the story of the atomic bomb chronicles the development and use of the first atomic bombs this is a remarkable story about the lives and times of the brilliant scientists seasoned military officers and determined government leaders who reshaped history and irrevocably changed the dynamics of warfare

for centuries the world has witnessed the development and use of increasingly complex and powerful military systems and technologies in the process the art of war has truly become the art of combined arms warfare in which infantry artillery air support intelligence and other key elements are all coordinated for maximum effect nowhere has this trend been more visible than in the history of twentieth century warfare originally published as an essential in house study for u s army officers during the 1980s this much revised and expanded edition remains the most complete study available on the subject rewritten with a much wider readership in mind it both retains its enormous practical utility for military professionals and provides a valuable and appealing introduction for scholars and general readers jonathan house author of the original work brings the story of combined arms up to the present covering among other things desert storm the war in chechnya and the rise of smart weapons and related technologies he traces the evolution of tactics weapons and organization in five major militaries american british german russian and french over 100 years of warfare revealing both continuities and contrasts within and between these fighting forces he also provides illuminating glimpses of israeli and japanese contributions to combined arms doctrine expanding his insightful analysis of the world wars and the wars in korea and vietnam house also offers much new material focused on the post vietnam period throughout he analyzes such issues as command and control problems of highly centralized organizations the development of special operations

forces advances in weapons technology including ballistic and anti ballistic missile systems the trade offs involved in using heavy versus light armed forces and the enduring obstacles to effective cooperation between air and land forces his strong critique of the air superiority propaganda that came out of the gulf war is sure to spark some heated debates rigorously comparative house s study addresses significant questions about how nations prepare for war learn or don t learn its harsh lessons and adapt to changing times and technologies unique in the annals of the literature on warfare it will be the standard work on this subject for a long time to come

grunden s analysis of this fundamental flaw in the japanese war effort seamlessly weaves together science technology and military history to provide an entirely unique look at a crucial but understudied aspect of world war ii comparing the science and weapons programs of all the major combatants he demonstrates that japan s failure was nearly inevitable given its paucity of strategic resources an inadequate industrial base the absence of effective centralized management to coordinate research military hostility toward civilian scientists and bitter interservice rivalries in the end japan could not overcome these obstacles and thus failed to make the transition to the kind of big science it needed to ward off its enemies and dominate the far east book jacket
